

Step 1
Gather each 'segment' at the midpoint ...eg the central point between the canopy rib fastenings

Step 2
Hold 7 of the segments 'inwards' and wrap the eighth segment around. (if umbrella has a tie attached keep this segment til last)

Step 3
Wrap the final segment around the other seven segments - so they are enclosed or 'tucked in'

Step 4
Tie the strap

AVOID MAKING THE TIE AROUND SEGMENTS THAT ARE NOT 'GATHERED'

Step 5 - optional

On larger umbrellas (typically over 4m square) - add a second strap at a higher level
